SEIF AMR ATTIA

Seifamr5155@gmail.com ◦ +20 109 502 0233 ◦ linkedin/seif-amr ◦ github/SeifAmr-c ◦ portfolio

Full-stack engineer and data analyst who ships production web, iOS, and AI-powered applications across React/Node, React Native, Flutter, and cloud (Supabase, MongoDB, Firebase), and turns raw data into decisions with Python (Pandas, NumPy, Scikit-learn), SQL, and Power BI.

Dual B.B.I.S. in Business Information Systems, University of Northampton (UK) & Arab Academy for Science, Technology & Maritime Transport · GPA 3.78 (Excellent, With Honors), ranked 7th in class · 2022–2026

EXPERIENCE

ANMAT – Software Engineer Intern (On-Site), Cairo, Egypt (HQ: Riyadh, Saudi Arabia) ***09/2026***

- Designed and wrote stored procedures and functions in Microsoft SQL Server (T-SQL) that served as the data layer for the company portal, with full English and Arabic support.
- Built back-end APIs that exposed that data layer to the portal front-end.

Fenger Gruppe – Software Engineer Intern (On-Site), Germany ***09/2025 – 10/2025***

- Completed a two-month on-site internship at a German mid-sized group operating in construction, raw materials, and logistics, supporting IT and digitalization initiatives across its divisions.
- Analyzed, structured, and optimized internal business processes to improve coordination between logistics, operations, and administration.
- Prepared internal reports, analyses, and executive overviews for senior management, and supported invoice verification.

Commercial International Bank (CIB) – Data Security Intern (Remote), Egypt ***08/2024***

- Completed a one-month remote internship in data security, studying how a major bank protects customer data and core banking systems against cyberattacks.
- Examined common attack vectors and the security controls, system hardening, and architectural safeguards that prevent intrusion and reduce breach risk.

TECHNICAL PROJECT EXPERIENCE

Takhlees – B2B2C Marketplace Platform ***2026***

- Built and shipped a full-stack MERN B2B2C marketplace (React.js front-end, Node.js/Express REST API, MongoDB) digitizing port-clearance services across major Egyptian ports, with secure authentication and multi-tier payment workflows across 3 user roles; deployed on Vercel.
- Shipped an importer React Native app to submit clearance applications and present a dynamic QR code that clearance companies scan to confirm and fulfill shipments.
- Built a companion React Native app for clearance companies with a real-time pipeline (Pending / In Progress / Completed) and a QR-scanner tab advancing shipment status; authored full technical documentation (BRD, SRS, ERD, UML).

RepSay – AI-Powered Workout Logging System, Live on the iOS App Store ***2026***

- Shipped a cross-platform Flutter fitness app to the iOS App Store powered by AI speech recognition that turns English and Egyptian-Arabic voice input into structured workout data in real time, with automated categorization parsing exercises, sets, reps, and weights.
- Architected the back-end on Supabase (authentication, relational schema, cloud storage) with Firebase Cloud Messaging push notifications, and integrated Apple HealthKit for bidirectional health-data sync.
- Built a deterministic recovery/readiness scoring engine combining HRV, sleep, resting heart rate, and training load via z-scores against rolling baselines, plus a "Predict" tab estimating 1RM through the Epley formula and linear-regression projection.
- Delivered PDF monthly reports and a workout-intensity heatmap, and set up GitHub Actions CI/CD from a Windows environment, gating macOS runners to iOS-affecting changes to cut build minutes.

Bitcoin Price Prediction ***2025***

- Developed and compared Random Forest and Gradient Boosting models to predict Bitcoin prices from historical minute-level data, applying data cleaning, feature engineering, and model evaluation.
- Applied time-series analysis and predictive modeling using Pandas, NumPy, and Scikit-learn.

EXTRA-CURRICULAR

RobEn – PR & Marketing Member ***10/2022 – 03/2025***

- Interviewed and evaluated 50+ candidates across recruitment cycles and represented the university at the ICT event, demonstrating leadership, communication, and public speaking.
- Supported PR and marketing campaigns and helped secure sponsors, contributing to team collaboration, negotiation, and event promotion.

TECHNOLOGIES

Programming: Python, JavaScript, Java, PHP, T-SQL

Data & Analytics: Pandas, NumPy, Scikit-learn (Random Forest, Gradient Boosting), Matplotlib, Seaborn, SQL, Power BI, Excel

Frontend: React.js, React Native, Flutter, HTML, CSS, Tailwind

Backend & Databases: Node.js, Express, MongoDB, Supabase, Firebase, Microsoft SQL Server (T-SQL, SSMS), MySQL, Oracle Live SQL, phpMyAdmin

Tools: Git, GitHub, Vercel, Figma

CERTIFICATES & COURSES

- Google Data Analytics Professional Certificate, Google
- Python Data Structures, University of Michigan
- German Language – A1 Level, GUC
